BOBCAT SKIDSTEER

7-PIN BOBCAT ELECTRICAL PLUG

Get more use out of your Bobcat skidsteer control levers!

Greentronics' 7-Pin Bobcat Electronic Plug functions as the electronic bridge between your Bobcat skidsteer and your implement. Using a built-in circuit board, the unit converts a message on the CANBUS of the skidsteer to a 12V DC signal providing control of the implement's hydraulic valve or motor. You can now control your implement without having to take your hands off the levers.
